Computer Modules for  
Touchscreen Signage

**Integrates touch computing  
& Digital Signage**

**Commercial Grade**

**3-Year Warranty**

## Product Overview

The Elo Computer Modules (ECM) offer commercial-grade reliability and feature Intel® Core™ 6th Generation CPUs with enhanced graphics engine. Available with Intel i3, i5 and i7 processors for Microsoft® Windows® 10, Windows 7 or no operating system, the ECMs can be used to transform the 3202L, 4202L, 4602L and 5502L touchscreen monitors into powerful touchcomputer platforms with compatibility to most content management servers. The ECMs can also help enable customer engagement and immersive brand experiences by adding a new exciting dimension to traditional broadcast digital signage - the power of touch. Using Elo's computer modules instead of a separate external device can reduce complexity, provide added reliability, minimize mounting profile and reduce installation/maintenance costs.

Centralized management and security capabilities of Microsoft Windows ensures compatibility with many content management servers and web-based consoles for seamless connection with the internet, digital marketing, interactive whiteboard, building directory, virtual receptionist, and point-of-information (POI) applications. The ECM can also support optimal partitioning of locally cached and network stored content, allowing developers to monitor and deploy content via device-to-device or web connections.

**Easy installation to Elo's IDS display  
- delivering one of the industry's  
thinnest commercial grade all-in-one  
large format touch computers**

**No external cables required - AC  
power, video and USB signals pass  
between the computer module  
and the Elo IDS display via an  
internal docking connector**

**Quick-access hard drive for easy  
initial imaging and field service**
